

How to login to Cisco AnyConnect VPN in Windows 10

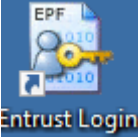

The following steps can be followed to establish the connection and successfully login to the DFO network.

- You will first need to login to your entrust to register your mykey. Locate your

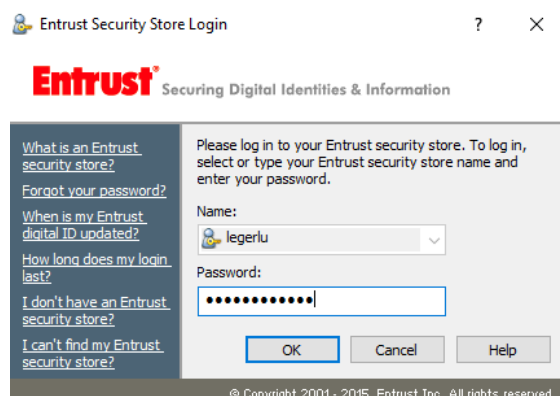

mykey .epf file  normally located in a folder called mykey on the desktop and double click on it. This will prompt you to put in a password. You

can also find the entrust icon located on the bottom right  on the taskbar

 right click and select login or double click on

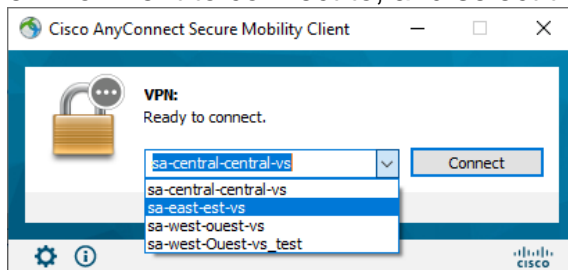

the desktop icon called entrust login 

- Enter your Entrust password:

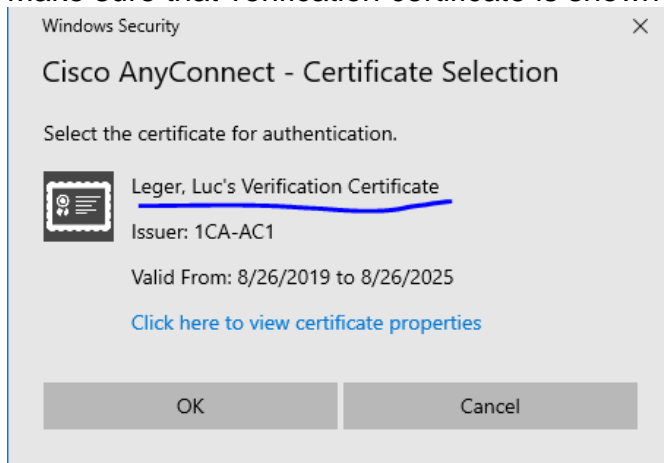

The image shows the 'Entrust Security Store Login' window. It features the Entrust logo and tagline 'Securing Digital Identities & Information'. On the left, there are several links for help: 'What is an Entrust security store?', 'Forgot your password?', 'When is my Entrust digital ID updated?', 'How long does my login last?', 'I don't have an Entrust security store?', and 'I can't find my Entrust security store?'. The main area prompts the user to 'Please log in to your Entrust security store. To log in, select or type your Entrust security store name and enter your password.' It includes a 'Name:' dropdown menu with 'legerlu' selected, a 'Password:' field with masked characters, and 'OK', 'Cancel', and 'Help' buttons. A copyright notice at the bottom reads '© Copyright 2001 - 2015, Entrust, Inc. All rights reserved.'

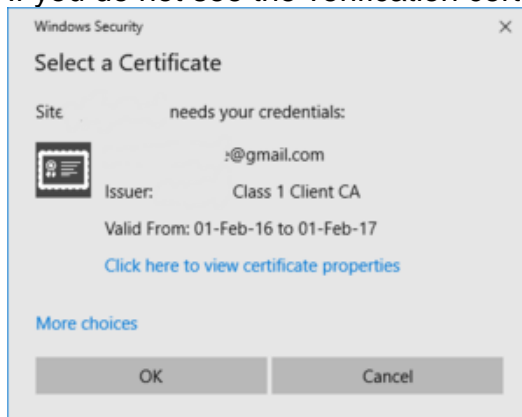

- Open Cisco AnyConnect SVPN  in your System Tray or do a search by clicking the magnifying glass on the bottom left and type cisco. select the environment to connect to, and select the "Connect" button.

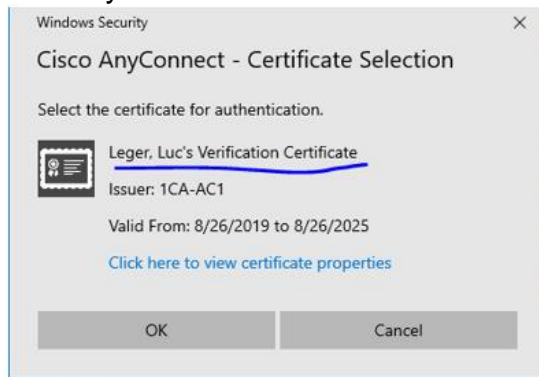

- During the connection process, you will be prompted select an Entrust certificate. Make sure that verification certificate is shown and click ok.

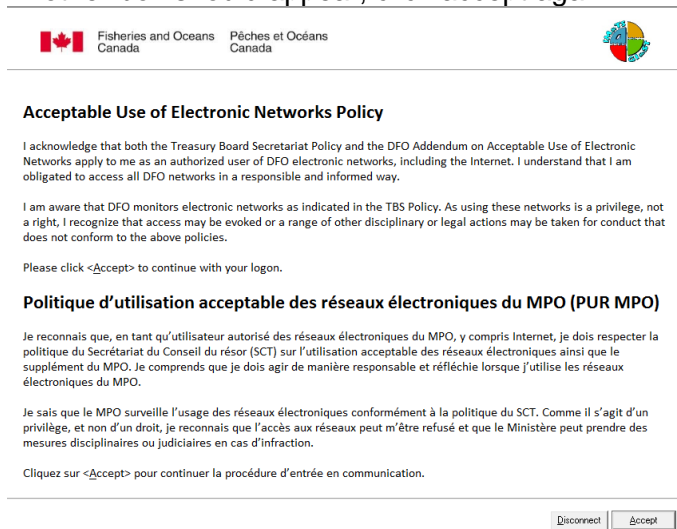

- If you do not see the verification certificate then select more choices.

- Select your Entrust Verification Certificate:

- Another box should appear, click accept again

- You should now be connected to the VPN
